Fahad Bin Aziz Nabil

Web Developer | App Developer | Full-Stack Developer

Experience:

- Built a Student Hall Management System Web application
- Developed Node.js applications
- Collaborated on a Class Routine Management System with integrated scheduling and real-time notification features
- Collaborated on Lettery, an Android app built with Kotlin and XML

Projects:

Student Hall Management System (Backend) — GitHub

- Completed the full backend development and integrated it with the frontend for a Student Hall Management System, enabling features like room allocation, scheduling, Payments etc.

Student Hall Management System (Frontend) — GitHub

- Collaborated to enhance features and implement new functionalities for improved usability, ensuring seamless integration with the backend in the Student Hall Management System.

Class Routine Management System (MERN Stack) — GitHub

- Collaborated in system design and data modeling.

Lettery (Android App) — GitHub

- Built using Kotlin and XML for a clean, native Android experience.
- Generates random letters to aid creative brainstorming and practice.

Education:

Bachelor's Degree in Computer Science and Engineering (Ongoing),
Chittagong University of Engineering and Technology
